

Update on U2Framework Progress - Session 4

What We Aimed For

1. Dive into the white paper and self-refinement process.
2. Restructure the GitHub repository for better modularity.
3. Create a guideline document for modularization.

What We Nailed

1. **White Paper Wisdom:** Reviewed the white paper and self-refinement process in the GitHub repo. It's all making sense!
2. **GitHub Glow-Up:** Restructured the repository, making it more modular and easier to manage. High fives all around!
3. **Guideline Gold:** Created and implemented a guideline document that serves as the roadmap for modularization. Smooth sailing ahead!

Hiccups Along the Way

1. **Modularization Musings:** Had to really think through how to break down the white paper into manageable modules. A few head-scratchers there.
2. **Role Clarity:** Took a moment to clarify individual roles in the modularization process. A little foggy, but we got it cleared up.

What's Next

1. **Module Mastery:** The next steps involve diving deeper into each module to refine and expand the content.
2. **Roadmap Rundown:** Will continue to follow the guideline document to ensure the modularization process stays on track.
