

## Update on U2Framework Progress - Session 3

### What We Aimed For

1. Make a fancy math formula look good.
2. Get that formula into GitHub and our Markdown files.

### What We Nailed

1. **Formula Makeover:** Jazzed up a math formula using LaTeX. It's looking sharp!
2. **Automate All The Things:** Got GitHub to auto-create images from our LaTeX files. No manual work, yay!
3. **Markdown Magic:** Figured out how to get those images into our Markdown docs. But, dark mode is throwing us a curveball.

### Hiccups Along the Way

1. **First-Time GitHub Action:** Had a bit of a hiccup getting GitHub to run our automation for the first time.
2. **Dark Mode Drama:** Our images look great in light mode but not so much in dark mode. Gotta fix that.

### On the Horizon

1. **GitHub Action Tweaks:** We'll make sure GitHub only cares about the LaTeX files we change, not everything.
2. **Image Flexibility:** Gonna find a way to make our images look good whether you're a light mode fan or a dark mode devotee.
